RESEARCH EXPERIENCES

Towards Emotional Support Conversation Systems with Goal Awareness | Ph.D. Student

Advisor: Prof. Maggie Wenjie Li, Department of Computing, The Hong Kong Polytechnic University

Sep 2021 – Present

- Proposed a support strategy planning algorithm with lookahead heuristics to estimate the long-term effects of the adopted strategy on the user.
- Designed a dialogue framework, Cooper, which coordinates multiple specialized agents to collectively work towards a complex dialogue goal (e.g., emotional support, persuasion).
- Proposed a lightweight approach to avoid generating toxic content by manipulating the information flow within the attention layers of the language model during inference.
- Contributed to three first-author papers published at EMNLP 2022, EMNLP 2023, and AACL 2023.

Chinese Discourse Dependency Parsing | Research Assistant

Advisor: Associate Prof. Sujian Li, Institute of Computational Linguistics, Peking University

Sep 2018 – June 2020

- Proposed a zero-shot approach to conduct Chinese discourse dependency parsing via cross-lingual mapping.
- Explored the feasibility of unifying discourse resources with the dependency discourse framework.
- Contributed to two first-author paper published at DSNNLG 2019 and CCL 2021.

WORK EXPERIENCES

Microsoft Research Asia

Research Intern

Beijing, China

June 2024 – Present

- Contributed as the core contributor of SIGMA, a pre-trained LLM series for the system-domain.
- Proposed a decoding algorithm for alleviating LLM hallucination, which implicitly incorporates with self-consistency into its objective (published at ICLR 2025 as the first author).

Tencent Jarvis Research Center

Research Intern

Shenzhen, China

May 2020 – May 2024

- Focused on the research topic of automated medical consultation systems; contributed to three first-author papers, published at ACL 2021, IJCAI 2022, and NLPCC 2022, along with nine patent technologies.
- Constructed the first large-scale entity-centric medical consultation dialogue dataset, MedDG.
- Won the 1st Prize for “the Competition at 21st China National Conference on Computational Linguistics: Automated Medical Diagnosis Systems” in 2021.
- Organized the ICLR 2021 Challenge: Machine Learning for Preventing and Combating Pandemics.
